

SYSTEM AND METHOD FOR COMPUTER SECURITY USING MULTIPLE CAGES

ABSTRACT OF THE DISCLOSURE

5 A system and method are disclosed for providing security for a computer
network. Content sets are generated for a computer associated with the network. It is
determined whether a user should be routed to the generated content sets. If it is
determined that the user should be routed to the generated content sets, a generated
content set is selected and the user is so routed. Various actions and events may be
10 recorded in a logfile, and the logfile is analyzed using regular expressions.
